

Samson Kubiati

Operations & Process Analyst

SUMMARY

Operations Analyst with 3+ years of experience across process documentation, supply chain workflow analysis, quality assurance, and structured data review. Works hands-on in Excel and Python for data analysis, structured data review, and quality auditing. Background includes owning end-to-end procurement process logic for a multi-tenant SaaS platform, conducting a large-scale logistics delay-pattern analysis on 50,000+ order records, and designing operational documentation standards adopted across cross-functional teams. Google-certified in Project Management.

EXPERIENCE

Process & Operations Analyst | 01/2024 – Present

Obiri ERP — Software company building ERP solutions for SMEs

- Own the Procurement module workflow for a live multi-tenant SaaS platform serving 500+ SMEs, mapping process flows, defining operational business rules, and writing structured standard operating procedures used by a 6-person cross-functional team.
- Reviewed and audited 1,000+ structured operational records and process outputs to identify data quality and process inconsistencies, surfacing a 12% accuracy gap that was corrected before company-wide rollout.
- Designed and documented standard operating procedures for procurement workflow edge cases, reducing process ambiguity by 30% across two operational review cycles.
- Collaborated directly with engineering and operations leads to align process documentation with real-world SME use cases, improving downstream process accuracy across 3 operational workflows.
- Produced detailed process documentation and quality review checklists for new operational features, covering process compliance, output consistency, and accuracy standards.

Operations & Workflow Coordinator | 06/2023 – 12/2023

Independent Consultancy — Operations and process design consultancy

- Designed and launched a service-accessibility process improvement initiative for an underserved user segment: mapped the full user interaction workflow, defined a structured intake/categorization system, and manually reviewed 800+ process samples to refine the workflow.
- Evaluated process outputs for accuracy, appropriateness, and task completion quality across 5 stakeholder test sessions, iterating process guidelines after each round.
- Developed a structured categorization and workflow framework covering intake processing, data extraction, and contextual accuracy, with documented rationale for edge cases.
- Delivered a process and quality-review project for a logistics client, evaluating and grading 40+ outreach process variants against a defined quality rubric to identify top-performing approaches.

Operations Research & Process Associate | 01/2023 – 06/2023

Datapath Analytics — Data research and operations consultancy

- Conducted a structured logistics and supply chain analysis on Olist (Brazilian e-commerce/logistics dataset), categorizing 50,000+ order records to identify delivery delay patterns, with findings documented and published as a case study.
- Applied systematic quality review across operational documentation, process guides, and stakeholder research transcripts, flagging inaccuracies, inconsistencies, and process gaps using structured review checklists.
- Completed a Project Management course covering process evaluation frameworks, quality assessment methodology, and structured output review.

TECHNICAL SKILLS

Data	Excel / data analysis (formulas, pivot tables, dashboards, data validation) Python (data analysis, scripting) Structured data review Data quality review & audit
Systems	CRM and order-management systems Multi-tenant SaaS platform workflows Google Workspace Microsoft Office
Process	Process improvement Standard operating procedures (SOPs) Supply chain analysis Quality assurance & audit Workflow documentation Logistics & delivery analysis Project management Cross-functional collaboration Stakeholder management
Languages	English (native) Yoruba (fluent)

CERTIFICATES

Google Project Management Certificate | 2023 — Google / Coursera

Operations Process Course — Process evaluation, quality assessment, structured output review
